Weather Forecast Office Tropical Products & Services

Jessica Schauer

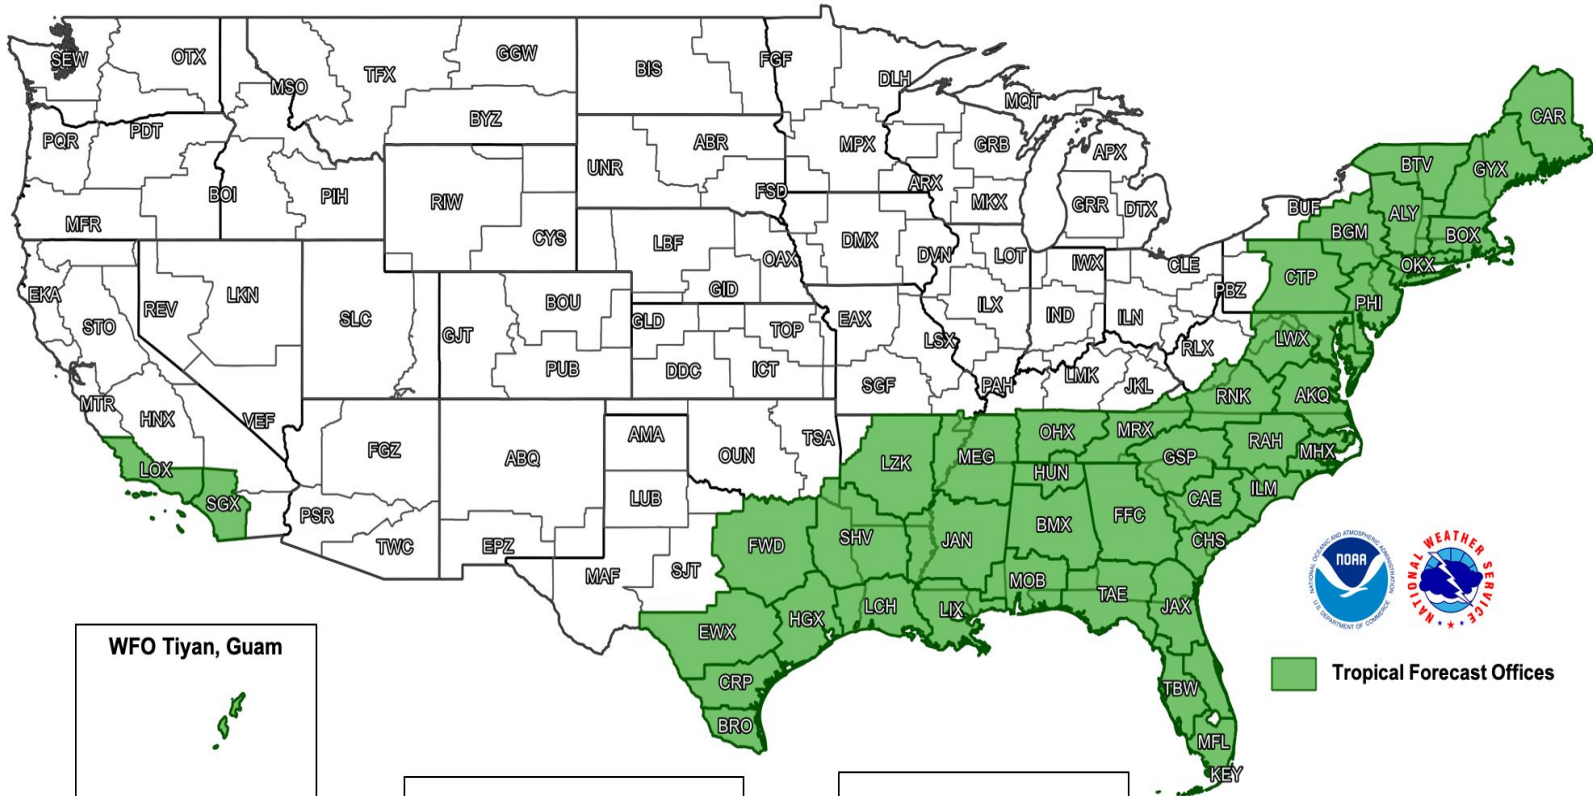

NWS Tropical Services Program Manager

January 26, 2023

Offices that Issue Tropical Products

WFO Tiyan, Guam

Including Micronesia (Republic of the Marshall Islands, Federated States of Micronesia, Republic of Palau)

WSO Pago Pago, American Samoa
Including Swains Island

WFO Honolulu, Hawaii

WFO San Juan, Puerto Rico

The appropriate hurricane center (NHC or CPHC) determines the *coastal* tropical storm and/or hurricane watches and warnings (W/Ws)

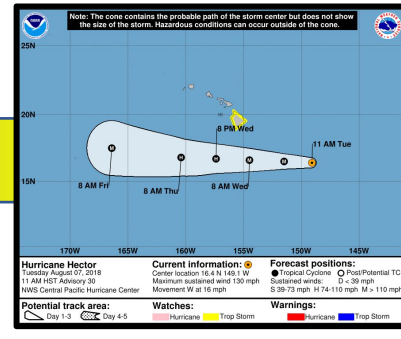

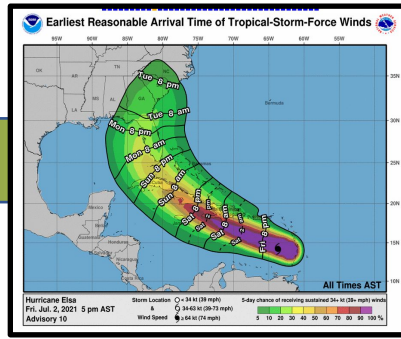

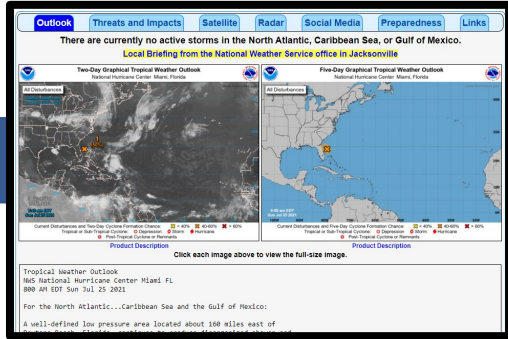

Local NWS Weather Forecast Offices (WFOs) determine *inland* tropical wind W/Ws as well as W/Ws for most other associated hazards (flooding for example).

Inland offices that do not issue tropical products will issue High Wind headlines in an NPW product in lieu of tropical storm or hurricane W/Ws if conditions warrant

Extreme Wind Warning

Weather Forecast Office (WFO) Tropical Products

Product	Purpose	Timeframe
TCV Tropical Cyclone Local Watch / Warning Product	Official Watch/Warning Product for Dissemination Detailed zone-based product with threats and impacts for all hazards (wind, surge, flooding rain, tornadoes)	Starts when watches or warnings are issued NHC TCP must be issued before office TCV can be created (Atlantic and East Pacific)
HLS ¹ Hurricane Local Statement	Overview of the storm and a summary of potential impacts and preparedness information for land areas only.	Starts when watches or warnings are issued WFO TCV must be sent before HLS can be created
HTI Hurricane Threats and Impacts	KML, grid, and graphical depiction of wind, surge, flooding, and tornado threats	Required when TCV is issued. May be sent up to 72 hours prior to onset of tropical storm force winds.
EWV Extreme Wind Warning	Short duration warning to advise public and partners of onset of major hurricane-force winds.	Only issued for when sustained winds of 115 mph or greater are occurring or expected to occur within an hour.

¹ HLS will contain any Watches/Warnings for American Samoa and Guam. Those offices do not issue a TCV product

TCV – Tropical Cyclone Watch/Warning

1 Segment for each NWS Forecast Zone.
Has coding to activate NOAA Weather Radio, Emergency Alert System (EAS), and Wireless Emergency Alerts (WEA).

...HURRICANE WARNING IN EFFECT...
...STORM SURGE WARNING IN EFFECT...

A Hurricane Warning means hurricane-force winds are expected
somewhere within this area within the next 36 hours

A Storm Surge Warning means there is a danger of life-threatening
inundation, from rising water moving inland from the coastline,
somewhere within this area within the next 36 hours

* LOCATIONS AFFECTED
- New Orleans
- Lakefront Airport
- Lake Catherine

```

NWS Zone

VTEC

Headlines

Each Segment has Sections for Each Hazard: Wind, Surge, Flooding, and Tornadoes. Each section has the “deterministic” forecast, conditions to prepare for, and local impacts.

```

* WIND
- LATEST LOCAL FORECAST: Equivalent Strong Tropical Storm force
wind
- Peak Wind Forecast: 73 mph
- Window for Tropical Storm Force Wind: until early Thursday

- THREAT TO LIFE AND PROPERTY THAT INCLUDES TYPICAL FORECAST
UNCERTAINTY IN TRACK, SIZE AND INTENSITY: Potential for wind 58
to 73 mph
- The wind threat has remained nearly steady from the
previous assessment.
- PLAN: Plan for dangerous wind storm force.
- PREPARE: Remaining efforts to should be completed as soon as
significant wind damage.
- ACT: Move to safe shelter before the wind becomes hazardous.

- POTENTIAL IMPACTS: Significant
- Some damage to roofing and siding materials, along with
damage to porches, awnings, carports, and sheds. A few
buildings experiencing window, door, and garage door
failures. Mobile homes damaged, especially if unanchored.
Unsecured lightweight objects become dangerous
- Several large trees snapped or uprooted, but with
numbers in places where trees are shallow rooted,
fences and roadway signs blown over.
- Some roads impassable from large debris, and more within
urban or heavily wooded places. A few bridges, causeways,
and access routes impassable.
- Scattered power and communications outages, but more
prevalent in areas with above ground lines.

```

Impacts

```

* FLOODING RAIN
- LATEST LOCAL FORECAST: Moderate rainfall with a few
higher amounts
- Peak Rainfall: 3.0 inches
- Window for Heavy Rain: until early Thursday

- THREAT TO LIFE AND PROPERTY THAT INCLUDES TYPICAL FORECAST
UNCERTAINTY IN TRACK, SIZE AND INTENSITY: Potential for
moderate flooding rain
- The flooding rain threat has remained nearly steady from
the previous assessment.
- PLAN: Emergency plans should include the potential for
moderate flooding from heavy rain. Evacuations and rescues
are possible.
- PREPARE: Consider protective measures for structures
vulnerable to flooding.
- ACT: Heed any flood watches and warnings. Failure to take
action may result in serious injury or loss of life.

- POTENTIAL IMPACTS: Significant
- Moderate rainfall flooding may prompt several evacuations
and rescues.
- Rivers and tributaries may quickly become swollen with
swifter currents and overspill their banks in a few places,
especially in usually vulnerable spots. Some creeks, canals, bayous,
and ditches overflow.
- Flood waters can enter some structures or foundations. Several
places may experience rapid inundation at underpasses, low-lying
spots, and poor drainage areas. Some streets and parking lots take
on moving water as storm drains and retention ponds overflow.
Driving conditions become hazardous. Some road and bridge
closures.

Hurricane Sally Local Statement Advisory Number 18
National Weather Service Tallahassee FL AL192020
525 PM EDT Tue Sep 15 2020 /425 PM CDT Tue Sep 15 2020/

This product covers eastern Florida panhandle, Florida Big Bend, southeastern Alabama and southwestern Georgia

****HURRICANE SALLY TO BRING LIFE THREATENING FLASH FLOODING TO THE FLORIDA PANHANDLE AND SOUTHEAST ALABAMA****

NEW INFORMATION

* CHANGES TO WATCHES AND WARNINGS:
- None|

* CURRENT WATCHES AND WARNINGS:
- A Tropical Storm Warning is in effect for Central Walton, Coastal Bay, Coastal Gulf, Coffee, Geneva, Holmes, Inland Bay, North Walton, South Walton, and Washington

* STORM INFORMATION:
- About 150 miles west-southwest of Panama City or about 190 miles west of Apalachicola
- 29.5N 88.1W
- Storm Intensity 80 mph
- Movement North or 350 degrees at 2 mph

SITUATION OVERVIEW

Hurricane Sally continues its slow trek towards the Gulf coast this morning. Heavy rain have already fallen across localized areas in the Panhandle. Through Thursday, another 10 to 15 inches will be possible, with isolated higher amounts possibly exceeding 20 inches. Additionally, the probability of Tropical Storm force winds impacting some inland locations across the Panhandle and southeast Alabama continues to gradually increase.

By far, the greatest threat Sally poses to the local area is the potential for flash flooding. Flash Flood warnings are already in effect across the Panhandle and is only expected to get worse over the next 24 to 48 hours. Areas that have the greatest potential of realizing the more extreme accumulations are west of the Apalachicola river, and primarily from Bay county to Dale county and points west.

As far as the wind threat is concerned, Tropical Storm force winds sustained and/or frequent gusts are increasingly likely across portions of the Panhandle and extreme southeast Alabama. Tropical storm force winds could begin as early as late tonight and may linger into Wednesday night.

A few tornadoes will also be possible as rain bands move ashore, and a tornado watch is in effect through at least the daytime hours today, and has been expanded a bit further east. At this time minor coastal flooding is expected to continue across the Panhandle and Big Bend, however, impacts from storm surge appear to be minimal at this time.

New Information

Storm Information

Situation Overview

POTENTIAL IMPACTS

Potential Impacts

* FLOODING RAIN:
Potential impacts from the flooding rain are still unfolding across the portions of the Florida panhandle. Remain well guarded against life-threatening flood waters having possible devastating impacts. If realized, these impacts include:
- Extreme rainfall flooding may prompt numerous evacuations and rescues.
- Rivers and tributaries may overwhelmingly overflow their banks in many places with deep moving water. Small streams, creeks, and ditches may become raging rivers. Flood control systems and barriers may become stressed.
- Flood waters can enter numerous structures within multiple communities, some structures becoming uninhabitable or washed away. Numerous places where flood waters may cover escape routes. Streets and parking lots become rivers of raging water with underpasses submerged. Driving conditions become very dangerous. Numerous road and bridge closures with some weakened or washed out.

Potential impacts from the flooding rain are still unfolding across portions of the Big Bend and southeast Alabama. Remain well guarded against life-threatening flood waters having possible limited to extensive impacts.

* WIND:
Potential impacts from the main wind event could begin overnight for portions of the Panhandle and southeast Alabama. Remain well sheltered from dangerous wind having possible significant impacts. If realized, these impacts include:
- Some damage to roofing and siding materials, along with damage to porches, awnings, carports, and sheds. A few buildings experiencing window, door, and garage door failures. Mobile homes damaged, especially if unanchored. Unsecured lightweight objects become dangerous projectiles.
- Several large trees snapped or uprooted, but with greater numbers in places where trees are shallow rooted. Several fences and roadway signs blown over.
- Some roads impassable from large debris, and more within urban or heavily wooded places. A few bridges, causeways, and access routes impassable.
- Scattered power and communications outages, but more prevalent in areas with above ground lines.

Potential impacts from the main wind event could begin overnight across the western Big Bend of Florida and extreme southwest Georgia. Remain well sheltered from hazardous wind having possible limited impacts.

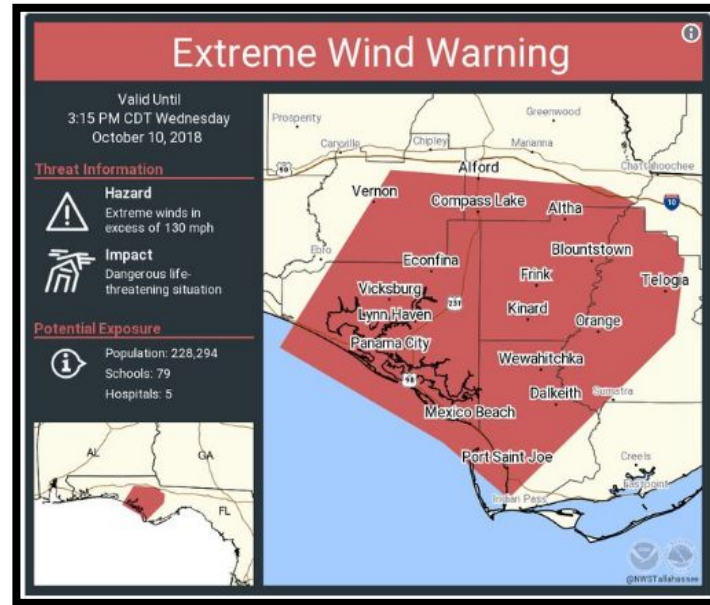

Potential Impacts

EWV – Extreme Wind Warning

- Reserved for events which truly pose a very significant threat of casualties
- With a category 3 or higher hurricane, issued for imminent onset of, or continuance of, winds greater than 115 mph.
- Extreme tropical cyclone winds expected to occur within an hour.
- Valid for three hours or less.
- Will alert via Wireless Emergency Alerts

NWS Local Office Tropical Web Page

- A great access point for local office products and resources.
- Available from the navigation menu on the Local Office (WFO) main page
- Linked from hurricanes.gov when a particular WFO is issuing tropical products
- Consistent look and feel across all tropical offices to make it easier for you to find information.
- If a “Local Briefing” is available, it will be linked on the “Outlook” tab with yellow highlighted text
- “Active Storms” and “Local Products” tabs only available when Advisories are being issued

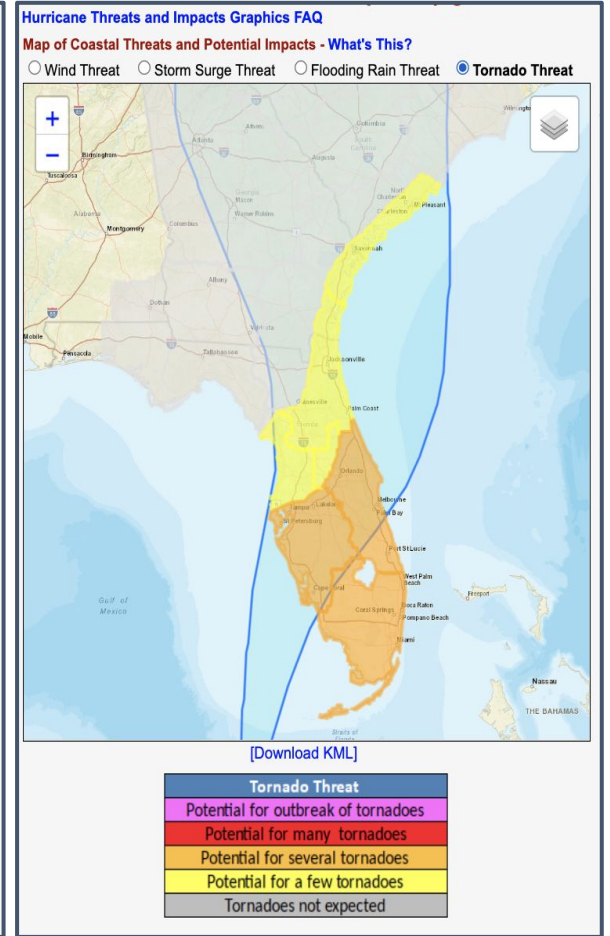

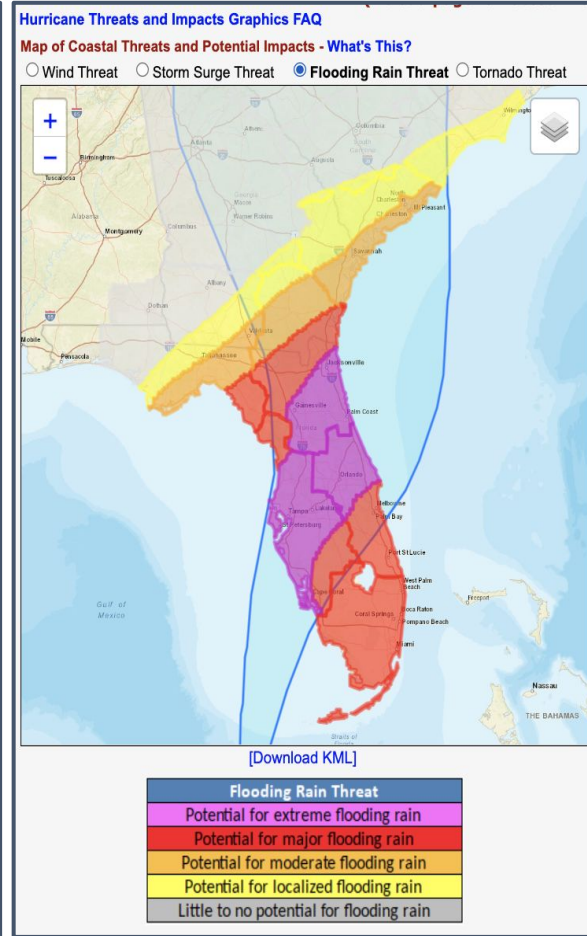

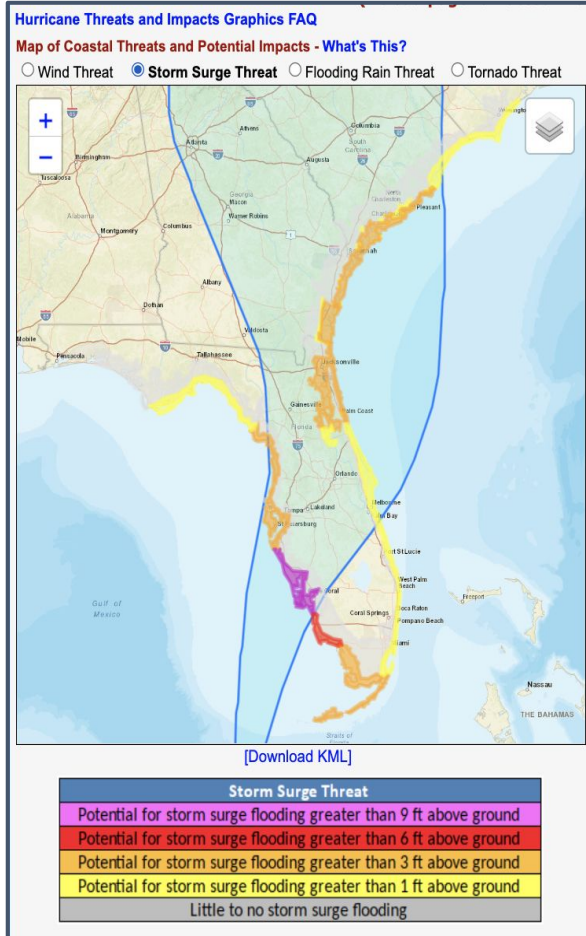

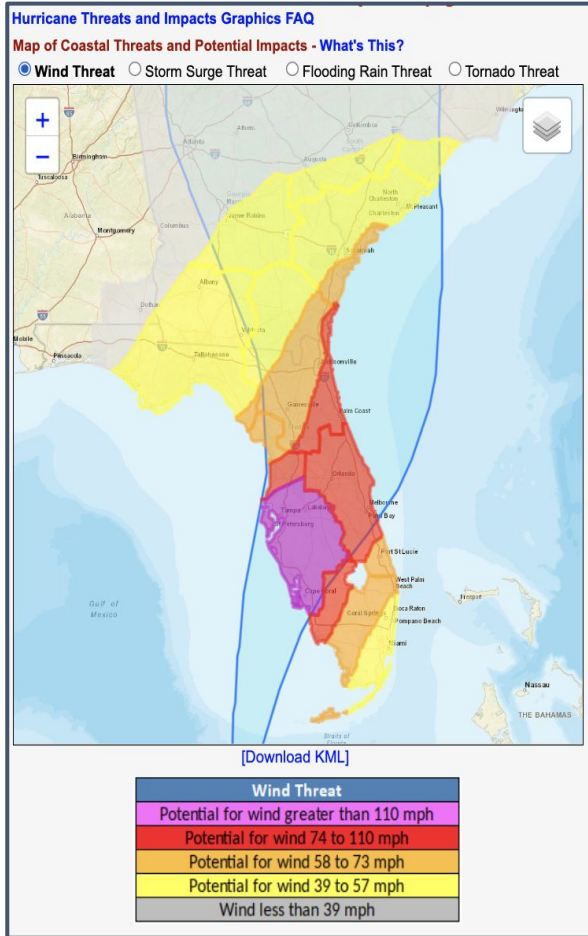

The screenshot shows the NWS Southern Region Tropical Webpage for Hurricane Harvey. At the top, it features the National Weather Service logo and the text 'NWS Southern Region Tropical Webpage' and 'Southern Region Headquarters'. Below this is a navigation menu with tabs for 'Outlook', 'Active Storms', 'Threats and Impacts', 'Local Products', 'Satellite', 'Radar', 'Social Media', 'Preparedness', and 'Links'. The 'Active Storms' tab is highlighted. The main content area displays 'National Hurricane Center Advisory 22 for Hurricane Harvey' with a '6 PM CDT POSITION AND INTENSITY UPDATE'. A map shows the storm's path over the Gulf of Mexico and the southern United States, with a cone of uncertainty. Below the map, there is a table with columns for 'Potential track area', 'Watches', 'Warnings', and 'Current wind extent'. At the bottom, there are four panels for 'Tropical Storm Wind Speed Probabilities', 'Hurricane Wind Speed Probabilities', 'Earliest Reasonable Arrival Time of Tropical Storm Winds', and 'Most Likely Arrival Time of Tropical Storm Winds'. A source note at the bottom reads 'Source: National Hurricane Center'.

Saturday Night	Mostly Clear	71 °F	87 °F
Sunday	Sunny	87 °F	87 °F

Detailed Forecast

Tonight: Tropical storm conditions possible. Showers and thunderstorms, mainly before 2am. Some of the storms could produce heavy rain. Low around 78. Chance of precipitation is 80%. New rainfall amounts between a quarter and half of an inch possible.

Thursday: A 40 percent chance of showers and thunderstorms. Mostly sunny, with a high near 86. Windy, with a southwest wind 21 to 24 mph, with gusts as high as 37 mph.

Thursday Night: A 30 percent chance of showers and thunderstorms, mainly before 2am. Partly cloudy, with a low around 73. Southwest wind 13 to 15 mph, with gusts as high as 23 mph.

Friday: A 20 percent chance of showers and thunderstorms. Mostly sunny, with a high near 87. West wind 10 to 14 mph, with gusts as high as 23 mph.

Friday Night: A 20 percent chance of showers and thunderstorms before 2am. Mostly clear, with a low around 71. West wind 5 to 8 mph.

Saturday: Sunny, with a high near 88. Northwest wind 5 to 8 mph.

Saturday Night: Mostly clear, with a low around 71. South wind around 6 mph becoming west after midnight.

Sunday: Sunny, with a high near 87. Northwest wind 3 to 6 mph.

Sunday Night: Mostly clear, with a low around 70. Light northwest wind.

Monday: Sunny, with a high near 87.

Monday Night: Partly cloudy, with a low around 70.

Tuesday: Sunny, with a high near 86.

Tuesday Night: Partly cloudy, with a low around 71.

Wednesday: A 20 percent chance of showers and thunderstorms. Mostly sunny, with a high near 86.

Impacts Narrative PDF

Parish and County Impacts Associated with Hurricane Ida (2021)

Narratives listed in alphabetical order with LA parishes first, followed by MS counties.

Updates:

- 09/28/2021 - Corrected gender of storm surge fatality in Jefferson Parish storm impacts narrative. Added a couple more details to Jefferson and St. Tammany Parishes, and Hancock, Harrison and Jackson Counties based on high water mark surveys, new tornado surveys and/or additional news reports.
- 09/21/2021 - Initial issuance.

Parish Name Ascension	Injuries: Unknown	Fatalities: 1 direct	Evacuations: 93
---------------------------------	----------------------	-------------------------	--------------------

The parish suffered widespread damage to trees, powerlines and homes due to wind. Numerous homes also suffered minor to moderate damage, mainly to roofs, as well as on his home. Over 100 roads across the parish were closed due to downed poles, or other debris. This includes I-10 between Prairieville and Gramercy, and several trees. At the peak nearly the entire parish was without power.

Parish Name Assumption	Injuries: Unknown	Fatalities: 0
----------------------------------	----------------------	------------------

The parish suffered minor to moderate wind damage. Several trees and power poles were downed as well. Most structural damage was in the form of shingle loss, although a few properties suffered more significant damage due to falling trees and debris. Nearly the entire parish was without power.

Parish Name East Baton Rouge	Injuries: Unknown	Fatalities: 2 indirect
----------------------------------------	----------------------	---------------------------

Ida's winds downed numerous trees, power lines and power poles across the parish. Several roads closed due to downed trees/lines or debris. Several structures suffered minor damage. Nearly 250,000 homes/businesses were without power during the peak. In the parish, heat-related fatalities occurred.

Parish Name East Feliciana	Injuries: Unknown	Fatalities: 0
--------------------------------------	----------------------	------------------

The parish suffered widespread tree damage with mostly minor to moderate damage to structures. A few homes suffered major damage due to falling trees. Several trees or other debris. At the peak approximately 60% of the parish was without power.

Begin/End Date 8/28/2021 - 8/31/2021

Fatalities
6 - Direct
25 - Indirect

Tornadoes 17

Event Summary

Hurricane Ida made landfall in southeast Louisiana as a category 4 hurricane and brought devastating impacts near the center of its path. Storm surge flooding overtopped numerous local levees, with some waves overtopping the Larose to Golden meadow levee as well. Ida maintained its intensity well inland from the coast, producing widespread significant wind damage to much of the area.

NOTE: It is unlikely that the point-based observations provided in this report sampled the peak values for the event.

Highest 10 Land Winds (mph)*

Station	State	Type	Sustained	Gust
Dulac	LA	WxFlow	87	120
Laplace	LA	PWS	86	
Galliano	LA	FCMP	81	106
1 NW Killona	LA	TTU Sticknet	70	96
Bourg	LA	PWS	70	
1 N Live Oak	LA	TTU Sticknet	64	86
Mandeville	LA	WxFlow	63	96
Waggaman	LA	WxFlow	63	80
4.7 S Vacherie	LA	TTU Sticknet	61	77
2 E Raceland	LA	TTU Sticknet	60	83

* Anemometer heights < 20 m
