

The Resilient Strategies Guide is a user-friendly introduction to resilience planning for water utilities.

Background & Utility Information

Why and how to build resilience for your utility type, size, and location

Priorities

Goals for preparedness and sustainability to help you provide service and meet your utility's mission

Assets

Infrastructure and water resources, including treatment plants, distribution systems, reservoirs, and rivers/streams

Strategies

Actions, operational changes, and infrastructure projects related to your priorities for building resilience

Funding Sources

Potential sources to finance selected strategies for your location and utility size

Report & Export

Detailed, customized report built from user selections, plus an option to export a file for use with EPA's CREAT

What does the Guide provide?

- Information based on your inputs and provided as a custom resilience plan
- Entire process takes minutes to complete
- Output can be used to delve into a risk assessment using EPA's CREAT
