

Climate Change & New England Forests

Vulnerability Assessment and Other Resources

Maria Janowiak mjanowiak02@fs.fed.us

Northern Institute of Applied Climate Science

USDA Forest Service

www.nrs.fs.fed.us/niacs

Chris Swanston, NIACS Director cswanston@fs.fed.us

(aka NIACS)

Northern Institute of Applied Climate Science

**Chartered by USDA Forest Service, universities,
non-profit and tribal conservation organizations**

Climate and carbon services

- Climate impacts modeling
- Vulnerability assessment
- Climate adaptation
- Carbon biogeochemistry
- Carbon management

20 staff members

(Forest Service/universities)

- 9 climate outreach specialists
- 6 research scientists
- 2 web specialists
- 3 GIS/lab specialists

Michigan
Technological
University

The
UNIVERSITY
of VERMONT

UNIVERSITY OF MINNESOTA

AMERICAN FORESTS

ncasi

National Council for Air
and Stream Improvement

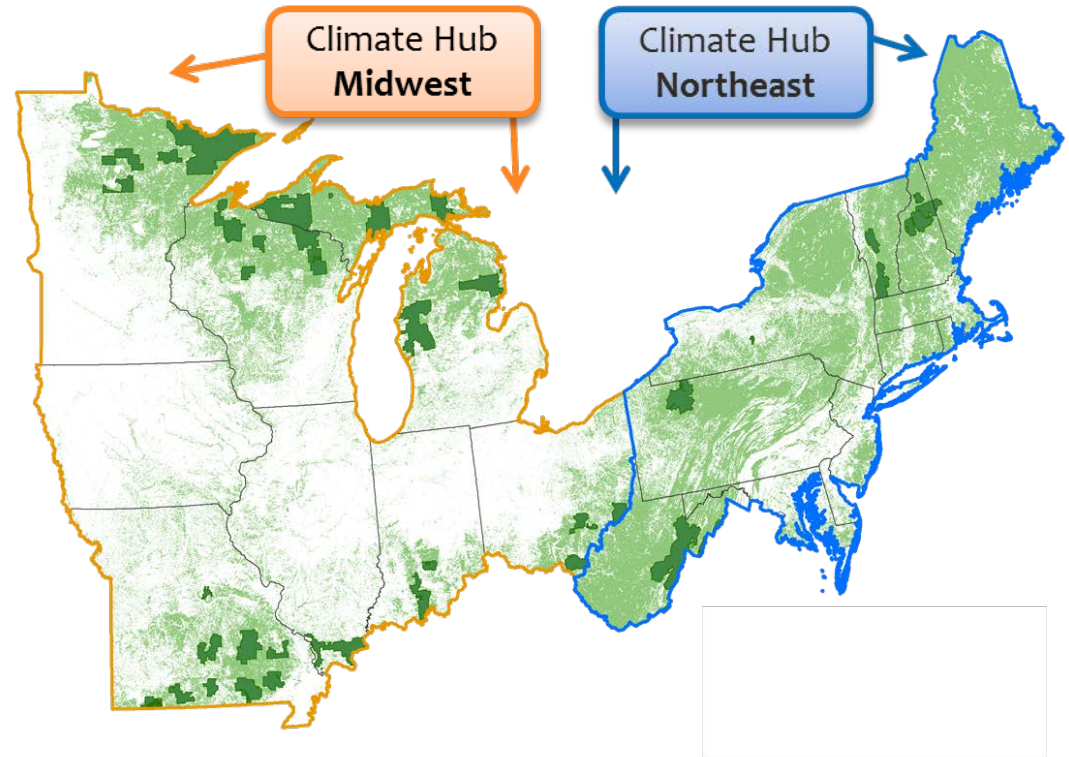

USDA Northern Forests Climate Hub

- “Specialty Hub” - forestry
 - Support 2 Regional Hubs
- 20 states in NE/MW
 - 42% forested
 - 41% of US population
 - >70% privately owned
- Climate Services
 - Assessment
 - Practical resources
 - Technical assistance
- Operated by NIACS

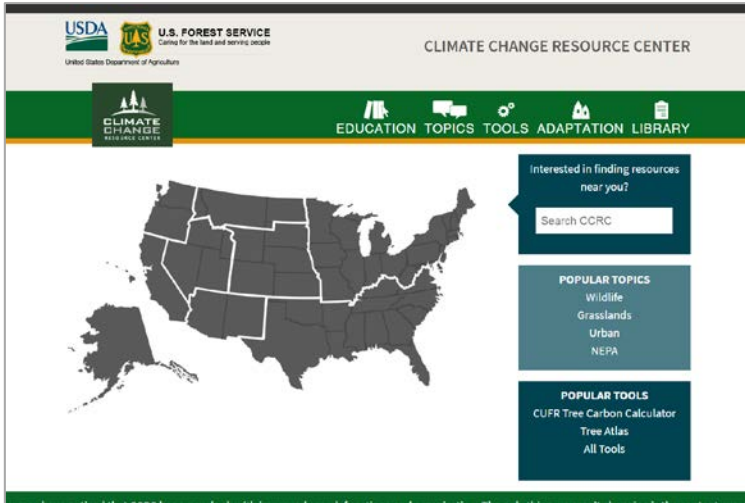

Northern Forests Climate Hub

U.S. DEPARTMENT OF AGRICULTURE

Additional Efforts We Facilitate

Climate Change Resource Center

USDA Forest Service national online resource that provides science-based information and tools about climate change and ecosystem management options to natural resource managers.

www.fs.usda.gov/ccrc

Climate Change Atlas

Documents the current and possible future distribution of **134 tree species** and **147 bird species** in the eastern United States under climate change for USDA FS Northern Research Station.

www.fs.fed.us/nrs/atlas

Climate Change Response Framework

What actions can help systems adapt to climate change and other threats while also meeting landowner needs?

Climate Change Response Framework

Structured, process oriented, works on multiple scales

Components:

Partnerships

Vulnerability Assessment

Forest Adaptation Resources

Adaptation Demonstrations

Progress:

150+ partner organizations
(and counting)

8 published assessments,
1 in press

Published 2012,
online version 2015,
2nd edition 2016

250+ demonstrations
underway

FY17: 85 presentations, 35 workshops, 20 publications, 3 courses

Vulnerability Assessment & Synthesis

- Series of reports for **natural resource professionals**
- Focus on **tree species and forest ecosystems**
- Examine a **range** of future climates
- Evaluate **key ecosystem vulnerabilities** to climate change
- Does **not make recommendations** or assess vulnerability to changes in mgmt., land use, policy

NEW REPORT!

www.nrs.fs.fed.us/pubs/55635

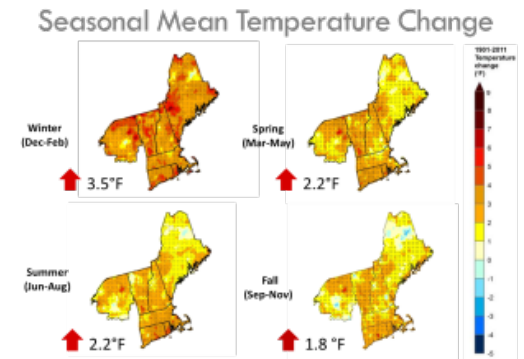

Additional resources & story map:

www.forestadaptation.org/ne-assessment

Vulnerability Assessment & Synthesis

- Synthesize state/regional assessments and scientific literature
 - Identify areas of agreement regarding ecosystems and species at greatest risk
 - Describe state-of-knowledge for anticipated changes in climate and response of forest ecosystems
- Incorporate new results from forest impact models: **Climate Change Tree Atlas, LINKAGES, LANDIS**
- Draw on local expertise of **scientists and land managers**

PCM B1

GFDL A1FI

Assessment Process & Expert Panel

Local Info

- Current forest conditions
- Climate trends

Potential Forest Change

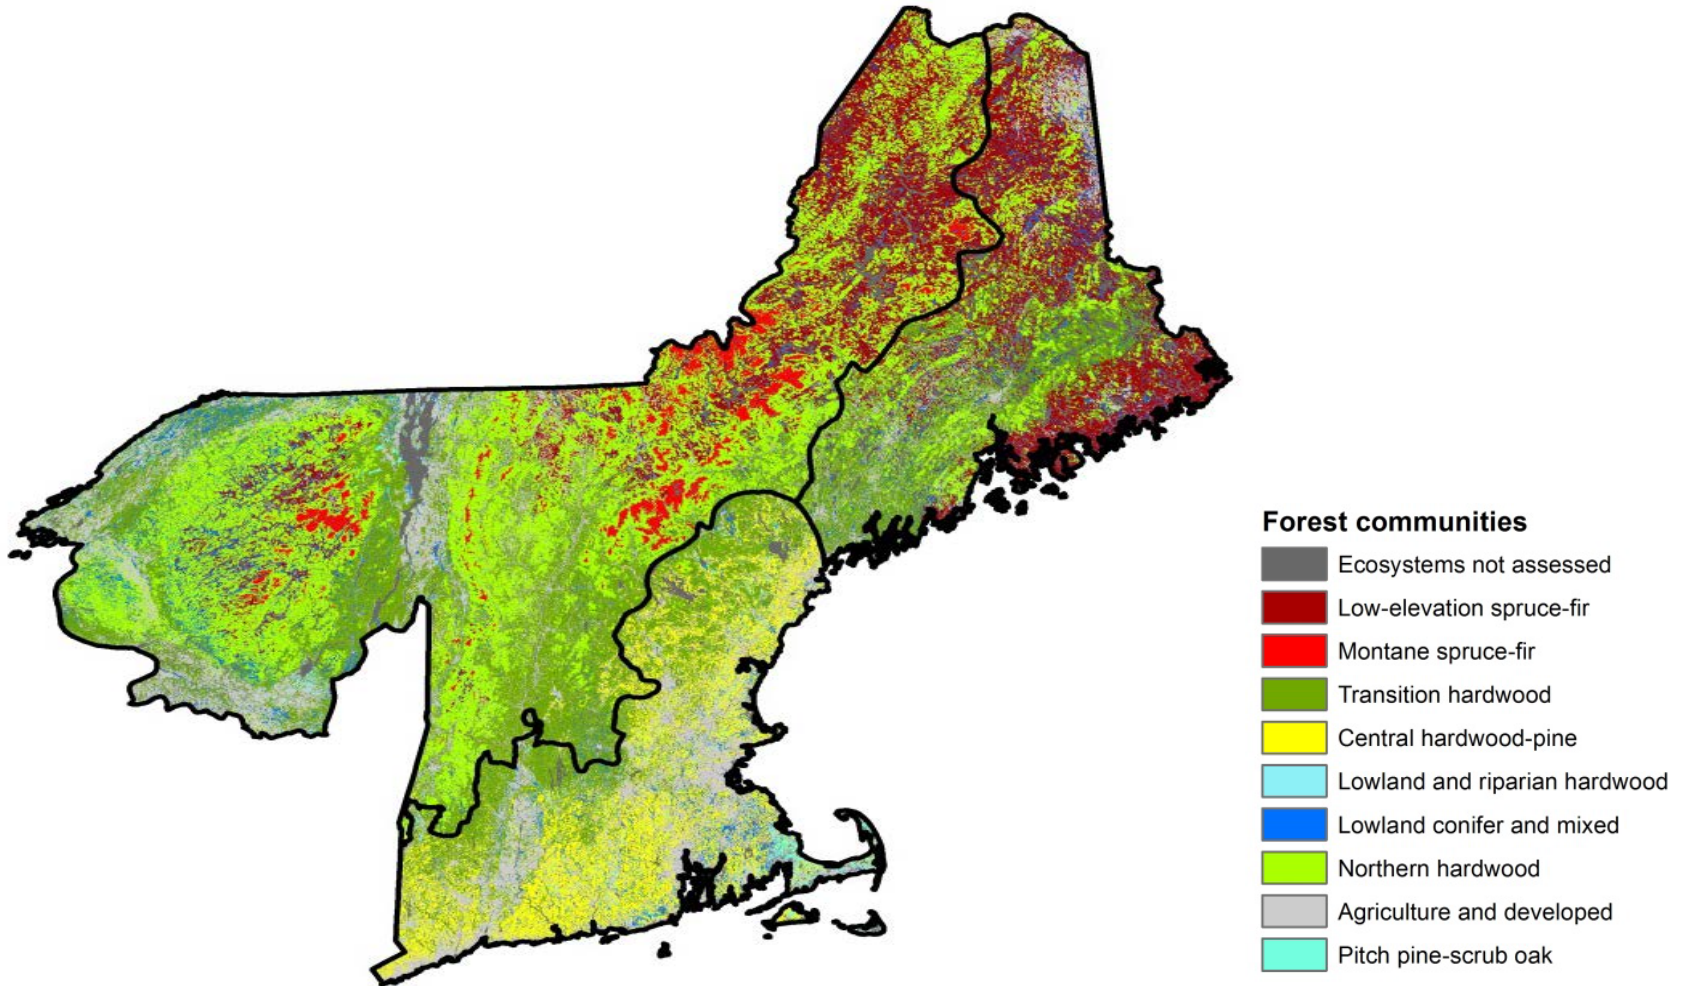

- Future climate
- Published research
- Model results

Expert Knowledge & Experience

(via workshop)

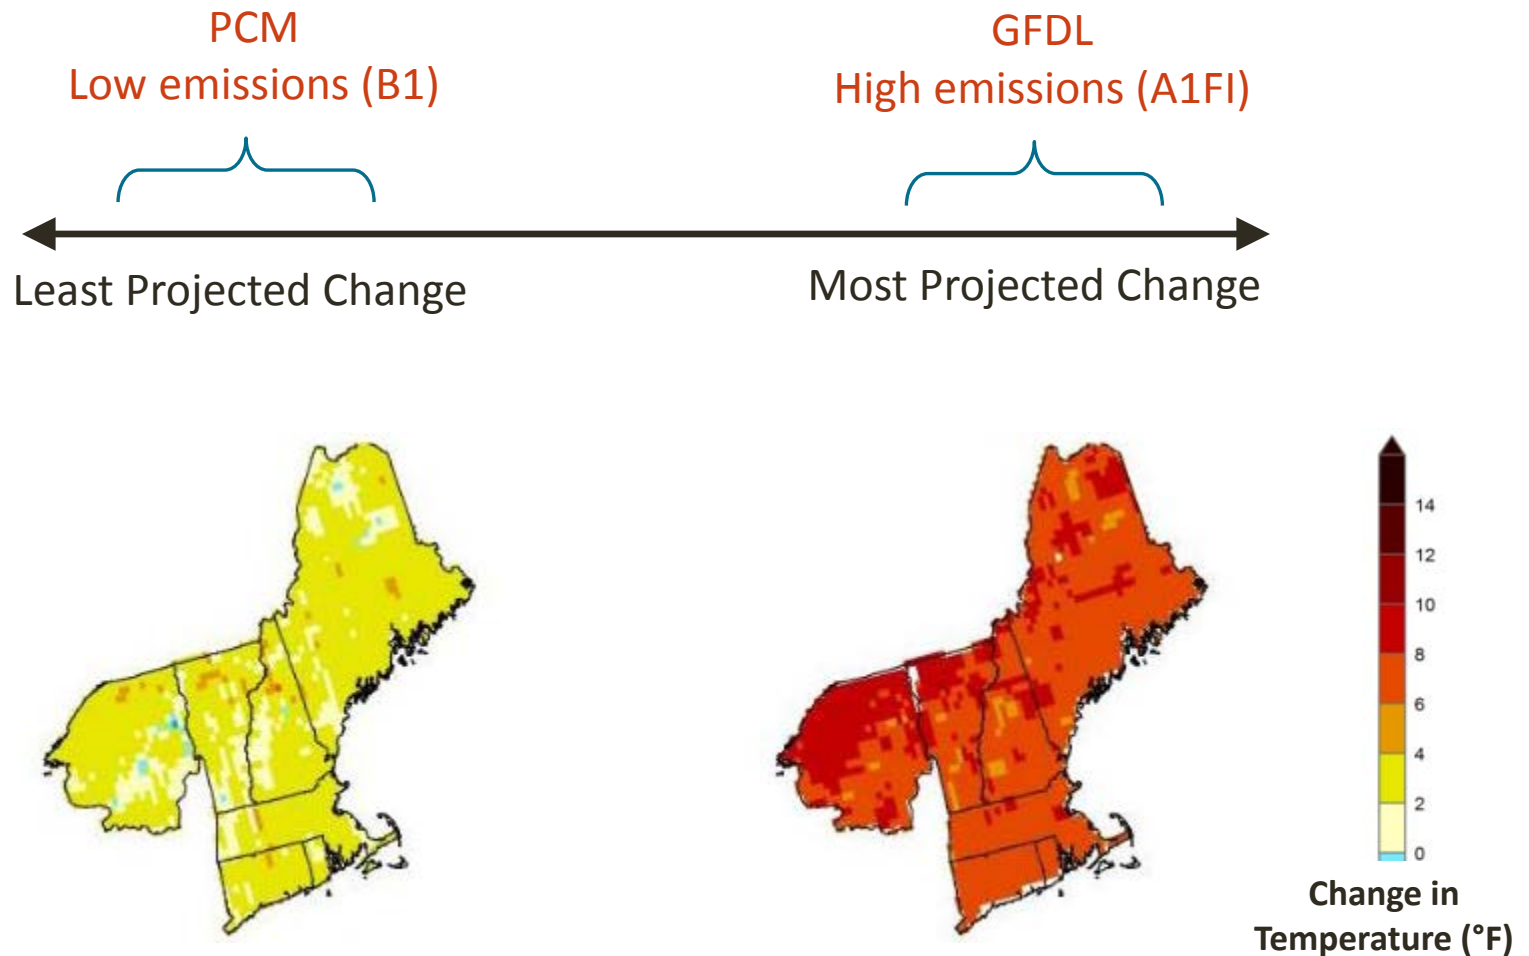

Forest Vulnerability & Confidence

Forest Communities (n=8)

Future Changes in Climate

Models and Emissions Scenarios

Future Changes in Climate

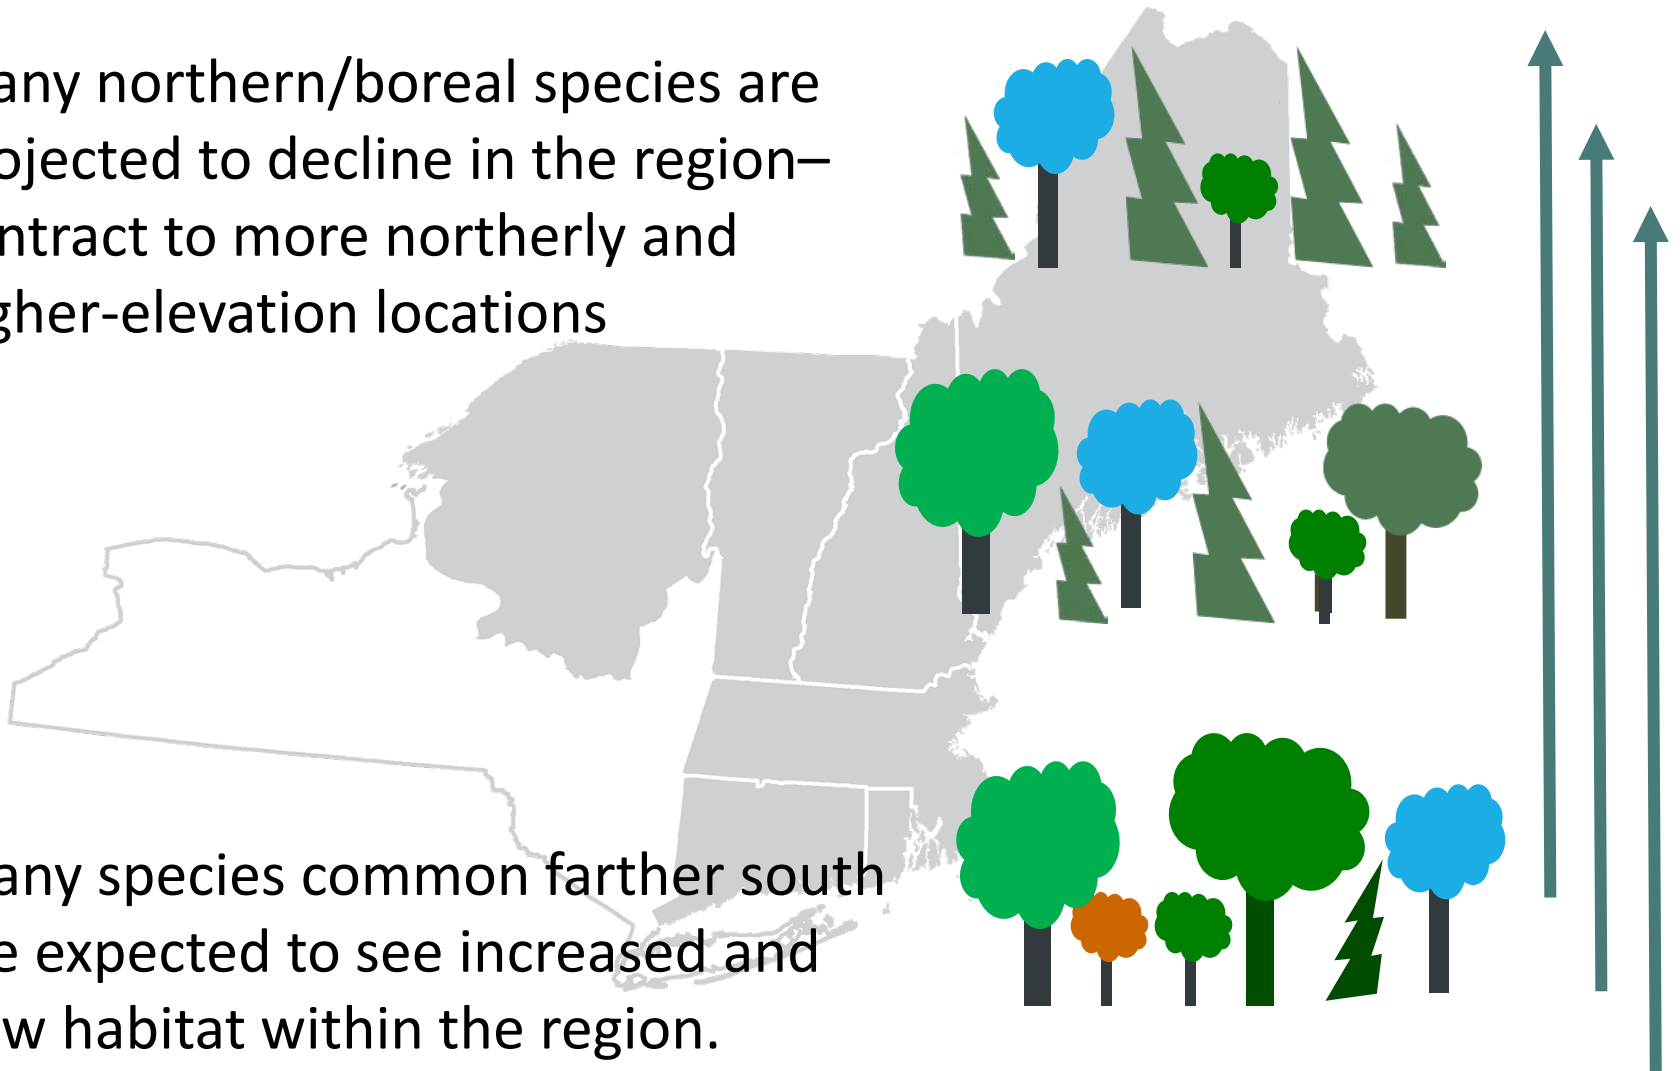

Anticipated Change in Climate	Evidence	Confidence
Warmer temperatures increasing another 3.5 to 8.5 °F	● ● ●	● ● ●
Longer growing season increasing another 20+ days	● ● ●	● ● ●
Shorter, warmer winters with less snow fall and snow cover	● ● ●	● ● ●
Sea levels rising by another 7 to 23 inches	● ● ●	● ● ●
Altered precipitation patterns with increased annual rainfall	● ● ●	● ● ●
Intense precipitation events that are more frequent and severe	● ● ●	● ● ●
Altered soil moisture potentially both wetter and drier	● ●	● ● ●
Increased risk of drought stress during the growing season	● ●	● ●

● ● ● = *robust/high*

● ● = *medium*

Effects on Forests

Many northern/boreal species are projected to decline in the region—contract to more northerly and higher-elevation locations

Many species common farther south are expected to see increased and new habitat within the region.

Effects on Forests

Likely to decline

- Balsam fir
- Black, red, & white spruce
- Northern white-cedar
- Eastern hemlock
- Black ash
- Paper birch
- Quaking aspen
- Tamarack

Mixed model results

- American beech
- Sugar & red maple
- Yellow birch
- White pine

Potential “winners”

- American elm
- American basswood
- Black cherry
- Eastern hophornbeam
- Gray birch
- Northern red oak
- Serviceberry
- Silver maple
- Sweet birch
- White oak

New habitat (esp. south)

- Black hickory
- Chinkapin oak
- Common persimmon
- Hackberry
- Loblolly pine
- Osage-orange
- Shortleaf pine
- Southern red oak
- Sweetgum
- Virginia pine

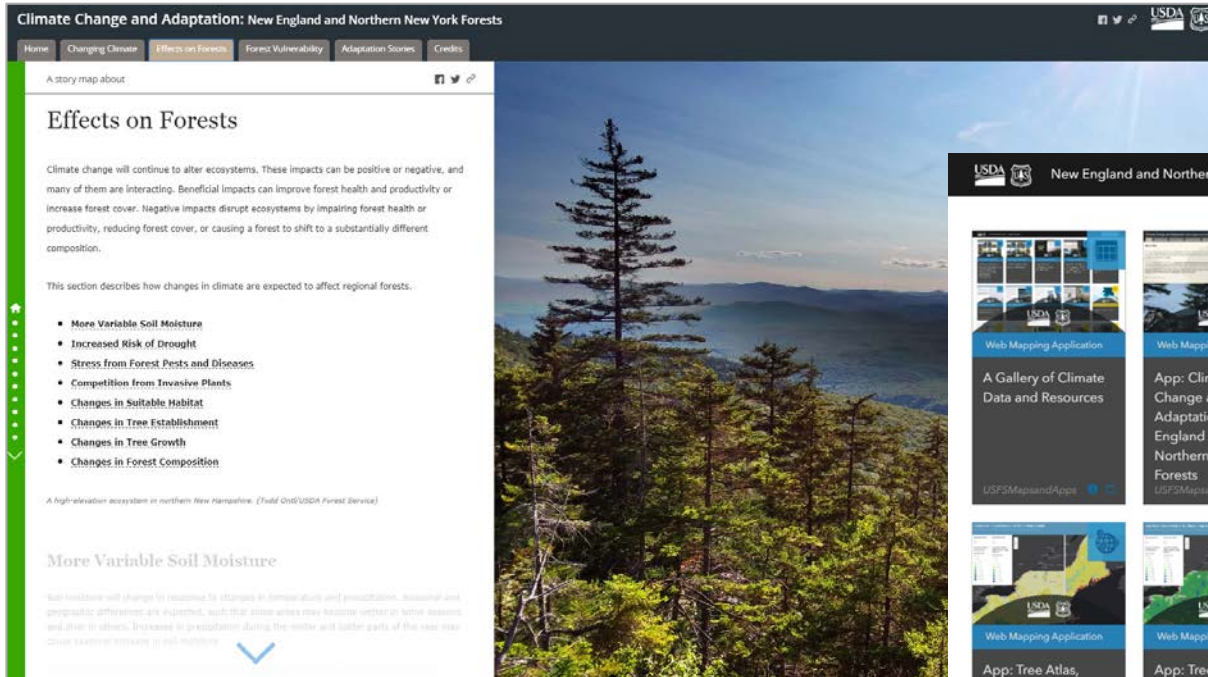

Forest Vulnerability

Forest communities will be affected differently

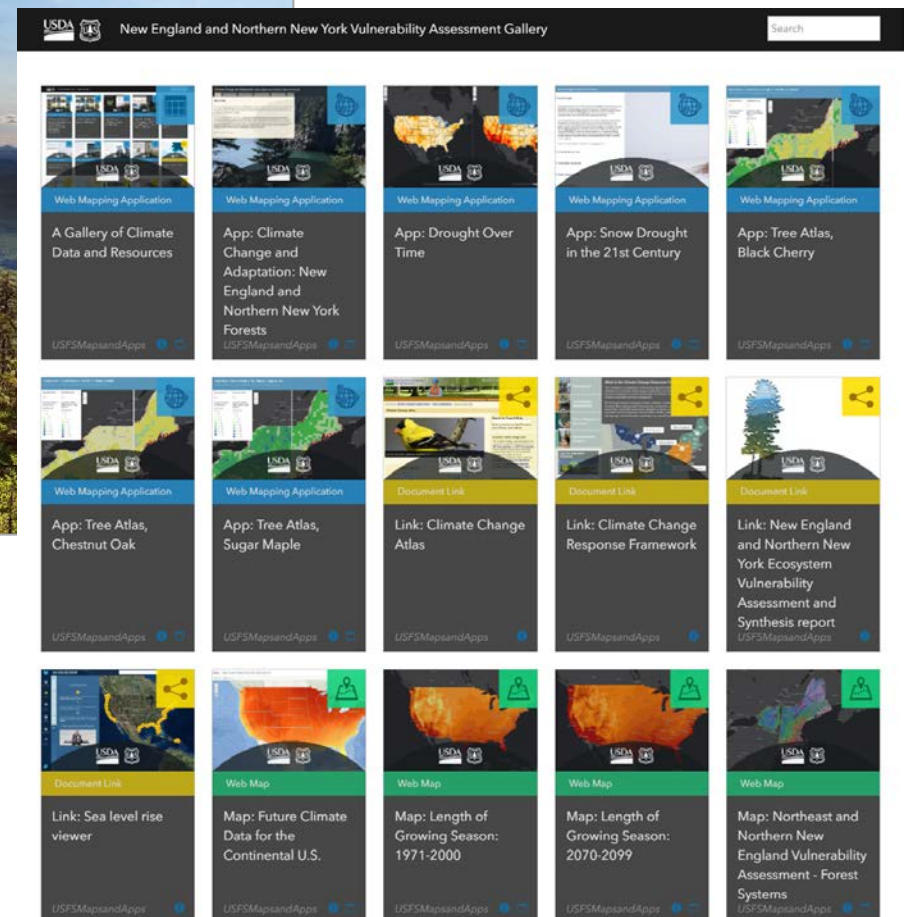

Forest system	Vulnerability	Potential impacts	Adaptive capacity
Low-elevation spruce-fir	Moderate-High	Neutral-Negative	Moderate
Lowland mixed conifer	Moderate-High	Neutral-Negative	Low-Moderate
Montane spruce-fir	Moderate-High	Neutral-Negative	Moderate
Lowland/riparian hardwood	Moderate	Positive and Negative	Moderate-High
Northern hardwood	Low-Moderate	Positive and Negative	Moderate-High
Transition hardwood	Low-Moderate	Positive and Negative	Moderate-High
Central hardwood-pine	Low	Neutral-Positive	Moderate-High
Pitch pine-scrub oak	Low	Neutral-Positive	Moderate

Helping Managers to Respond

Strategies & Approaches

Menu of adaptation actions

Adaptation Workbook

Structured process to integrate climate change considerations into management.

- Workbook approach

Also online: AdaptationWorkbook.org

Order a copy at:
www.nrs.fs.fed.us/pubs/52760

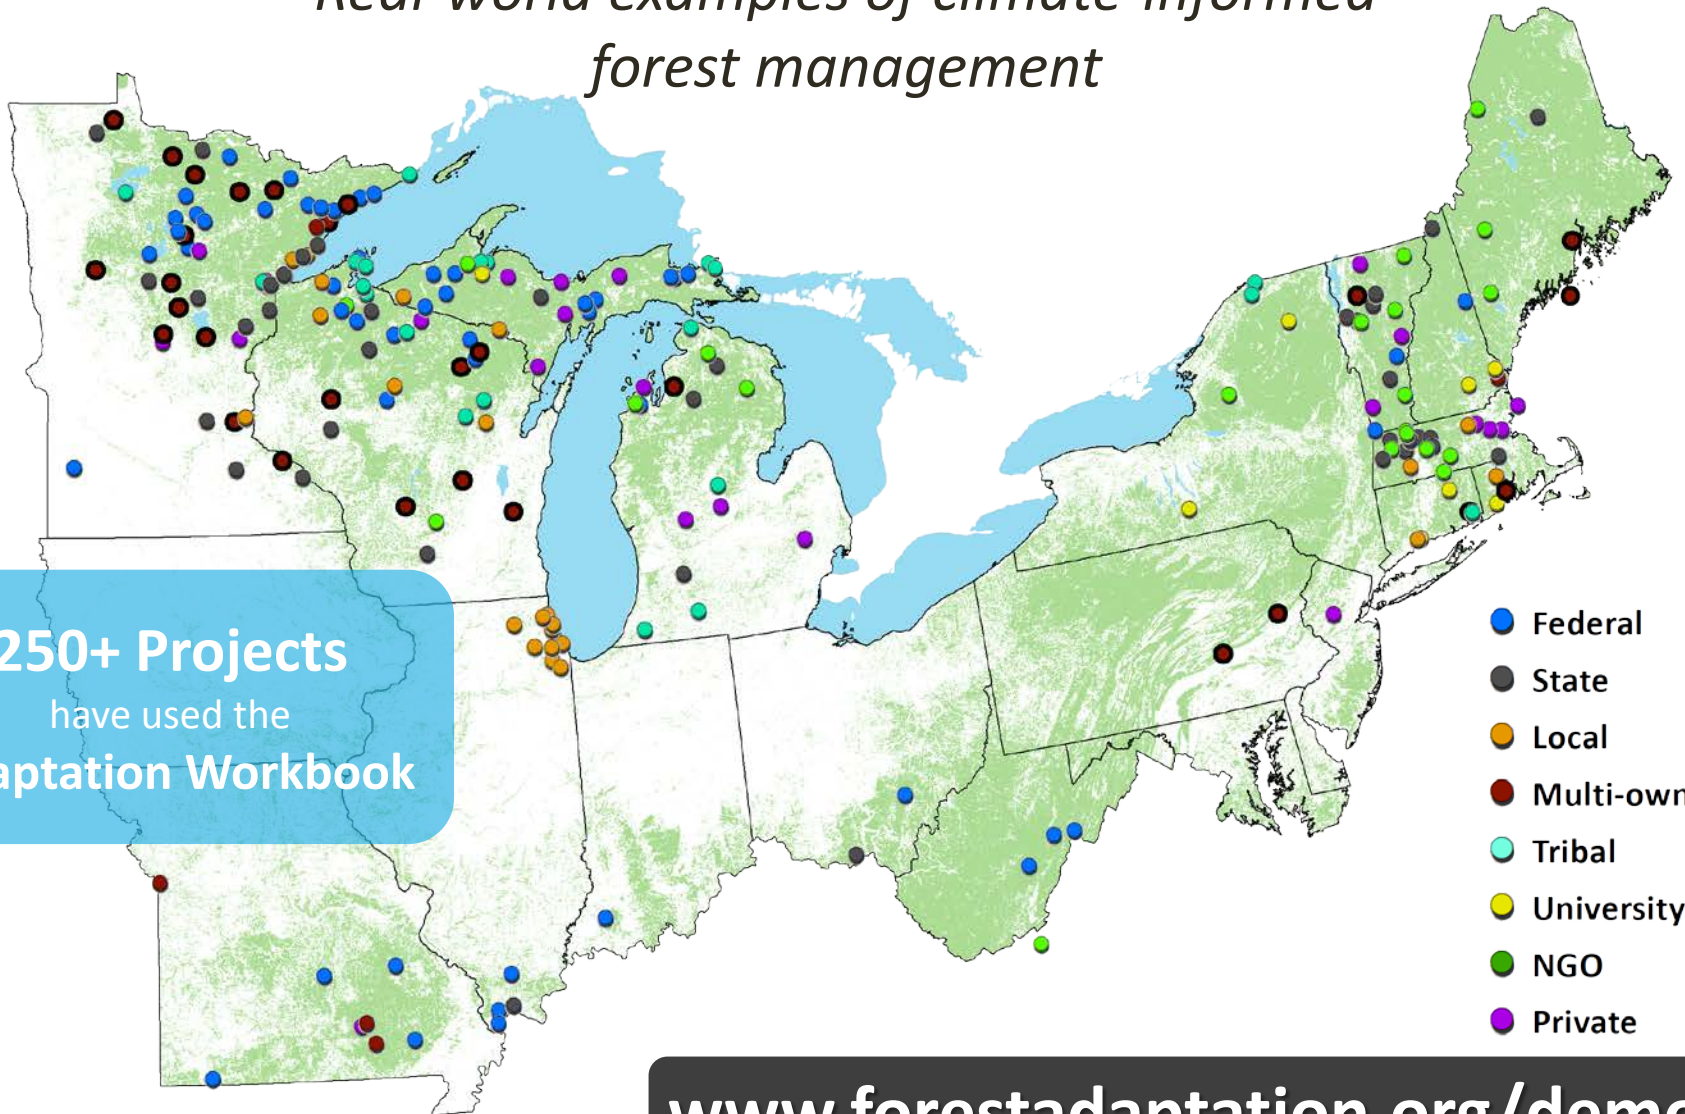

Helping Managers to Respond

- Adaptation Demonstrations provide **real-world examples** of forest management activities that:
 - Enhance the ability of forests to cope with changing conditions
 - Achieve land owner management goals
- Foster **cross-ownership** dialogue and learning
- Illustrate **diverse goals** and approaches

Adaptation Demonstrations

*Real-world examples of climate-informed
forest management*

250+ Projects
have used the
Adaptation Workbook
