

May Recap & Northeast DEWS Discussion

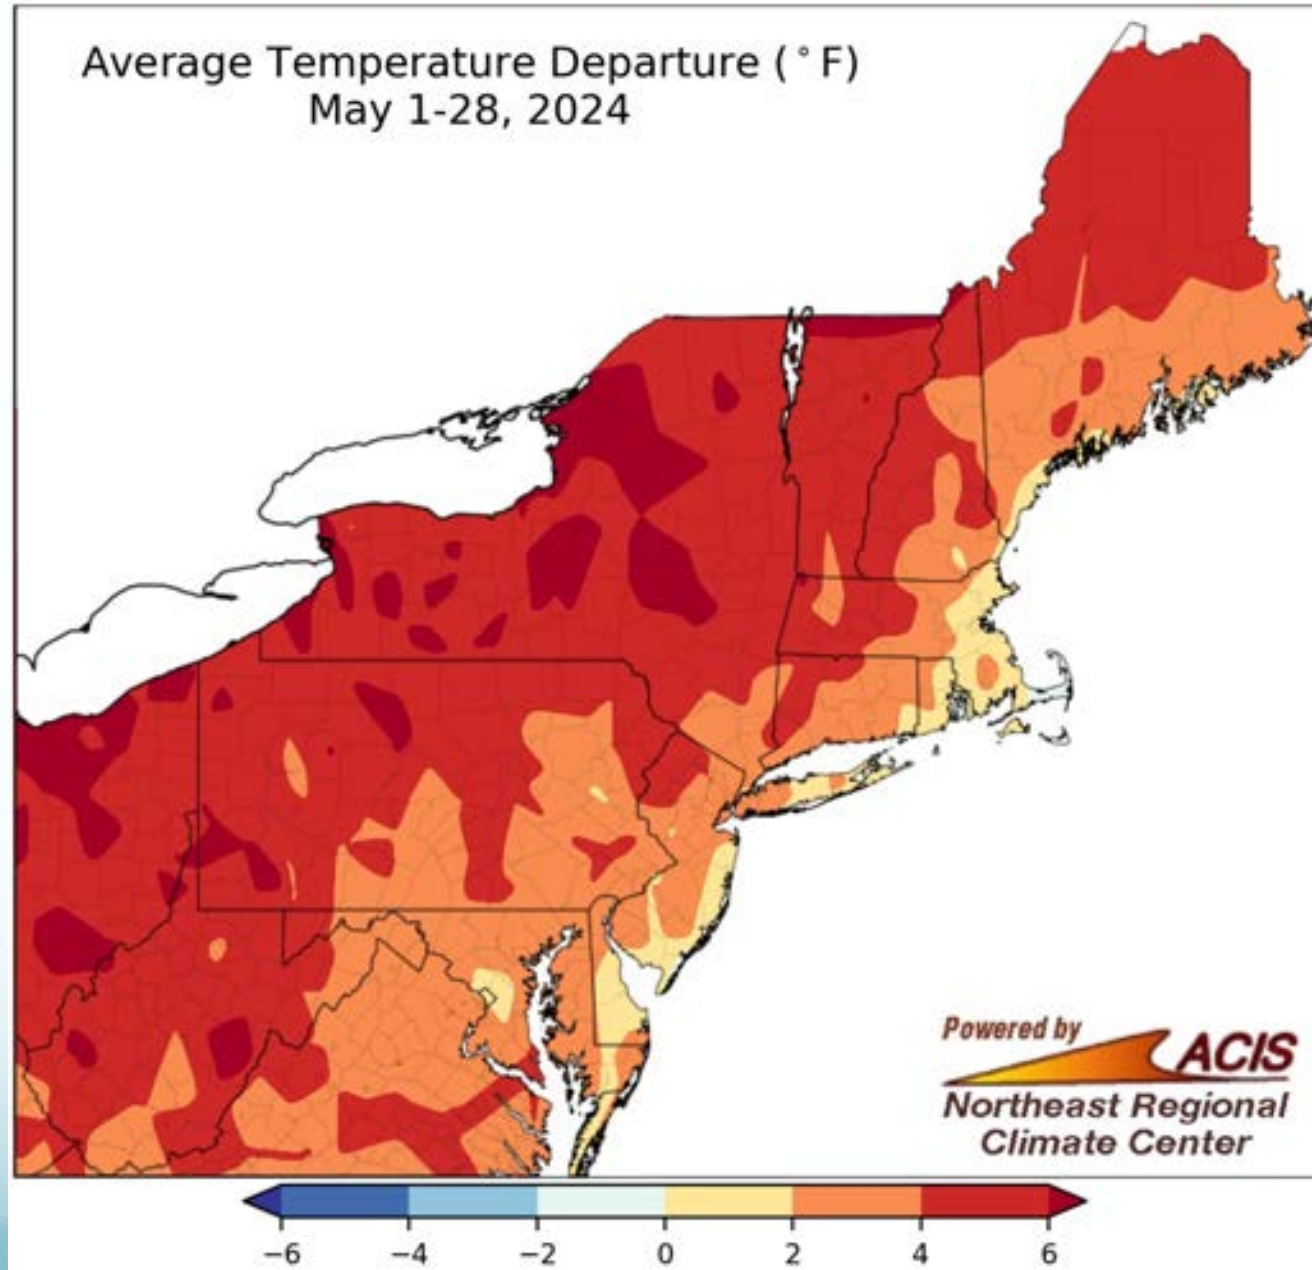

By: Samantha Borisoff, Climatologist
Northeast Regional Climate Center

Northeast Regional
Climate Center

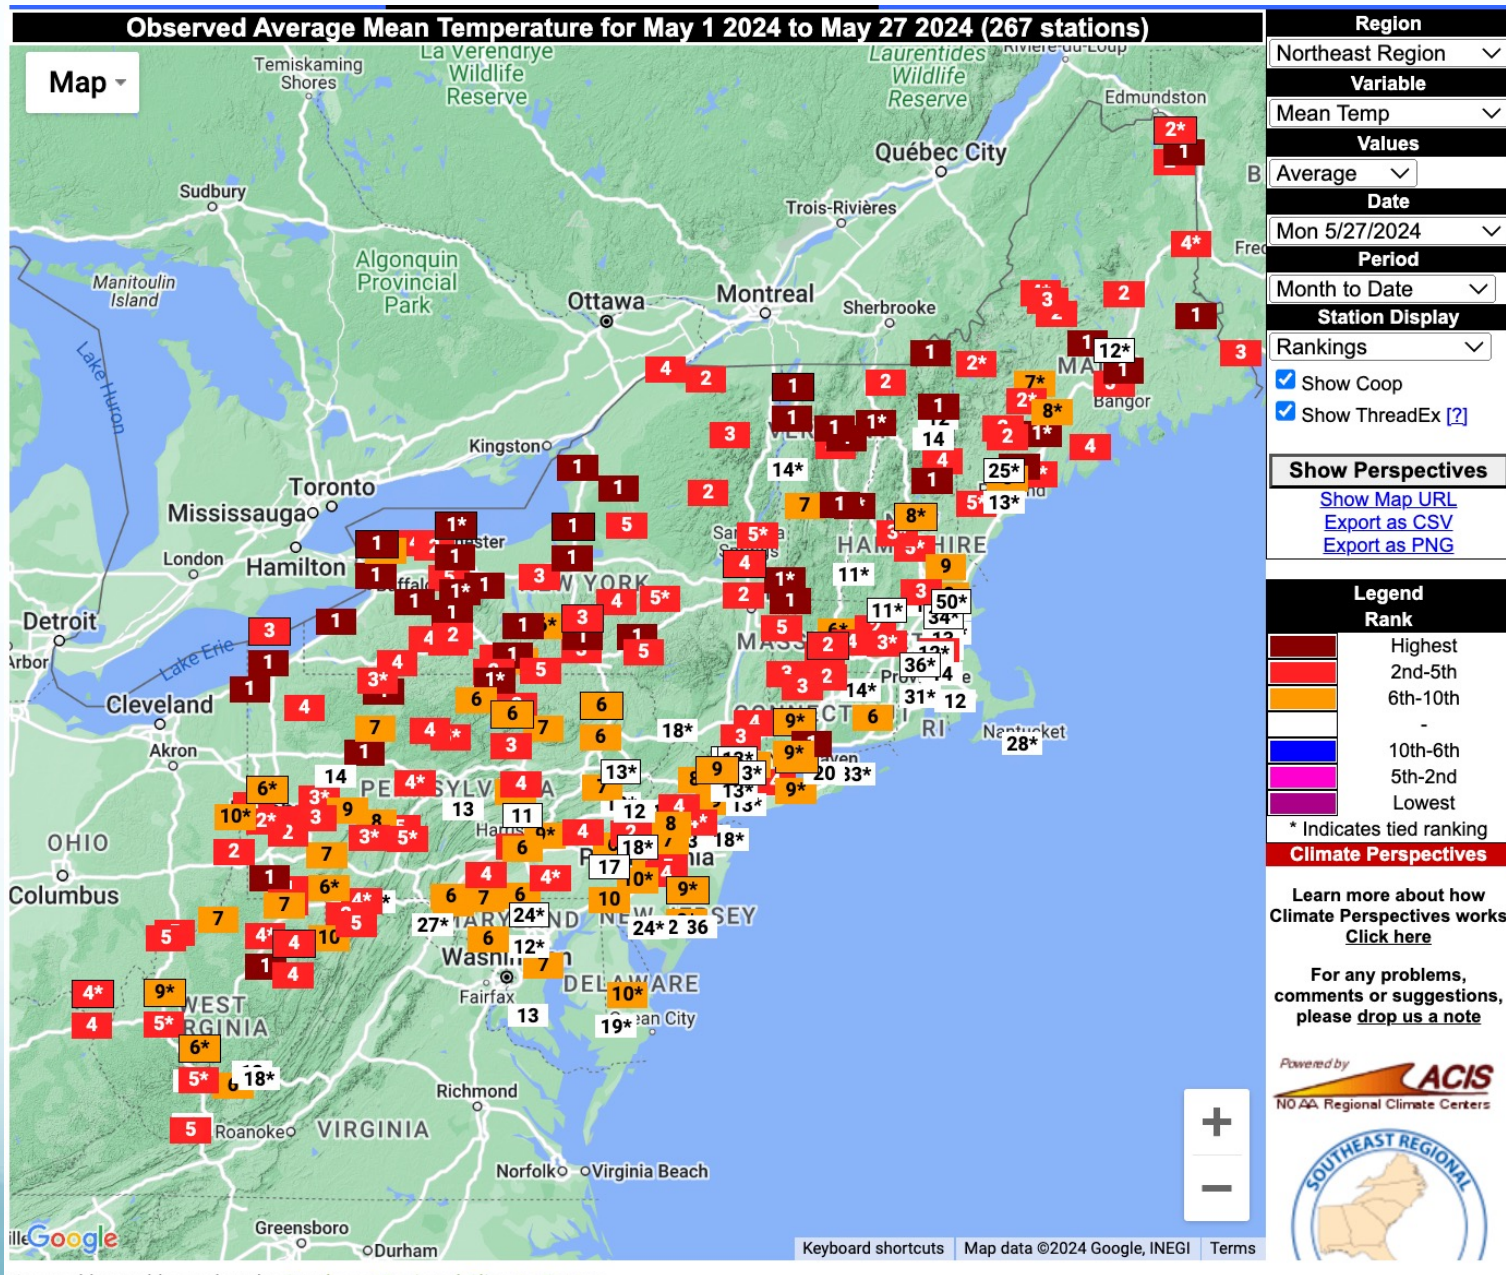

May Temperatures

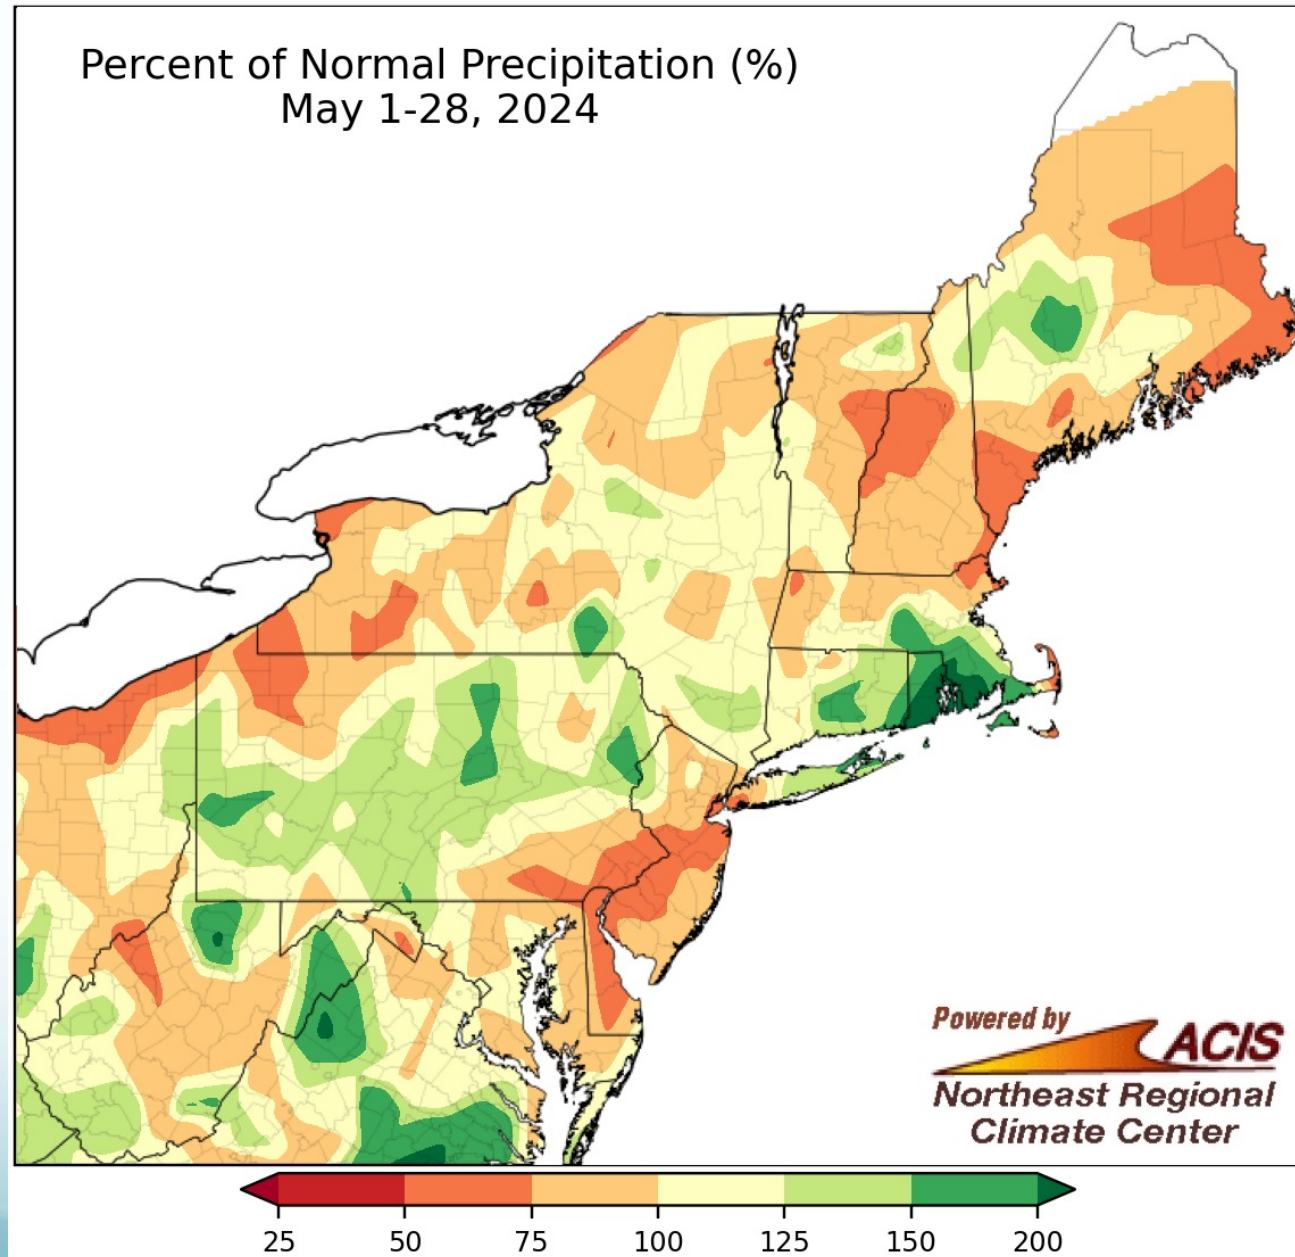

From near normal to more than 6°F above normal

May Temperatures

May Precipitation

From 50% of normal to more than 200% of normal

May Storms

Northeast –
18 tornadoes in May;
average is 6

Precipitation Forecast

Short-term Outlooks

Monthly & 3-Month Outlooks

Hurricane Outlook

	2024 Atlantic Season Outlook	1991-2020 Average Season
Number of Named Storms	17-25	14
Number of Hurricanes	8-13	7
Number of Major Hurricanes	4-7	3

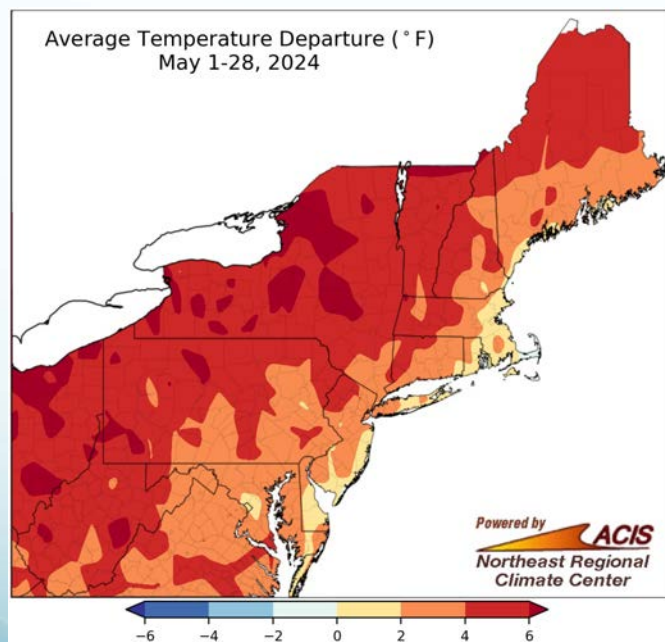

Summary

May-to-date conditions:

- Near- or above-normal temperatures; variable precipitation

Spring-to-date conditions:

- Near- or above-normal temperatures; near- or above-normal precipitation for much of the region
- Below-normal snowfall for most; above-normal for northern New England and northern New York

Drought:

- Abnormal dryness lingered in western New York and was introduced in northern Maine and southeastern Maryland

Outlooks:

- Short-term: near- or above-normal precipitation and temperatures favored for most areas
- June: above-normal precipitation for southern areas; “equal chances” for temperatures
- Summer: above-normal precipitation for multiple areas; above-normal temperatures for all
- Atlantic hurricane season: prepare now for a potentially very active season
